

Yamate Evening Seminar

June 24th, 2016, 16:00-17:00

Large meeting room, 2nd floor, Yamate 3rd Bldg.

Dr. Sadao Ota
(University of Tokyo)

Imagining beyond Imaging

As a mixture of advanced imaging, microfluidic, electrical and information technologies, I recently developed a novel fluorescence imaging flow cytometry that runs at throughput $\gg 10,000$ cells/sec. What kind of opportunities is available with this invention? What kind of uses can be truly exciting? I want to discuss its clues and potentials, which maybe possibly alter our view of science. Really welcome open minded criticisms, discussions, and collaborations!
